Dear Mr. President:

We have been watching with considerable interest the progress of the plan for compulsory health insurance.

Through all the high sounding oratory regarding the state of the nation's health, we might come to the conclusion that the people of these United States are in rather bad shape. We do not necessarily believe this so-called事实，但我们确实了解需要降低医疗成本。WE DO NOT FEEL THAT 4% SALARY INDUCTION IS THE ANSWER.

The bill in its present form is unfair. It is unfair in its thinking that $6000 a year is the average computed salary base. If a man makes $85,000 a year, he is in a position to pay more for his medical care and in most cases does so today. The $144 a year deduction up to $6000 means that the average man is paying the wealthy man's doctor bill. The bill is unfair in its thinking that $114 a year is the right amount needed. Many plans are in effect today costing much less and are equally efficient than government operated plans, if not more so. The plan will provide many thousand more on the public pay roll, which has already reached astronomical proportions.

This bill is definitely not the will of the people, but is more of a job planning scheme and we ask you to do all in your power to defeat it.

Yours sincerely,

[Signature]

W. I. Sargent
